# Chapter 1

## KNX interface library

### Author

Norbert Schmitz, [knx@nagilo.de](mailto:knx@nagilo.de)

### Date

November 2014

### Version

1.2.1

This library can be used to access the home automation bus system KNX using an IP gateway. More information on the bus may be found at [www.knx.com](http://www.knx.com) .

### Changes since version 1.0.0

- Added listener interface
- Added several new dpts. Now supporting dpt 1.001, 2.001, 3.007, 4.001, 5.001, 6.001, 9.001, 10.001.

The whole program including the header files are free to be used in any non-commercial application. A notification of usage to the author would be very nice.

Commercial use is strictly forbidden. In case you are interested in a commercial license please contact the author.

### Example

A minimal code example would look like this when setting group 1/2/3 to on using a data point type of 1.001 .

```
#include "knx.hpp"
int main(int argc, char ** argv) {
    knx::config config(argc, argv);
    knx::connection connection(config);
    knx::handle handle(connection);
    connection.set<knx::dpt_switch>("1/2/3", knx::dpt_switch::ON);
    return 0;
}
```

## Features

Although there are many eib/knx libraries available I started to develop an new knx library from scratch. The reasons for this are the following:

- Minimal dependencies:  
Many existing libraries contain dependencies to additional libraries which make the compilation process harder. libknx depends solely on boost. No other dependencies are allowed.
- Platform independence:  
libknx is portable. It is able to run on any linux operating system including Raspberry PI and on any Mac or Windows computer. The main development is realized on a Linux Debian 7.0 32bit machine but other distros and platforms will follow.
- Reduce to the maximum:  
The library on its own does not contain any additional overhead. It is capable of writing and reading knx messages – nothing more and nothing less. Any additional ideas I or other may have should be based on libknx without extending the base system.

## Current limitations

libknx is a brand new development which means that many features are currently missing. Most of them will be added in future. Version 1.1.0 has the following limitations:

- Only 3-part group addresses are available
- Only UDP communication is available
- Only the following data point types are available: 1.001(rw) 5.001(r) 10.001(w)

## Ideas

The development of such a library directly creates tons of ideas what can be done with it. Besides others these are:

- Control your curtains using a Kinect
- Control your lights using a Mac
- ...

Yours Norbert Schmitz

## Namespace Documentation

### 5.1 knx Namespace Reference

separated namespace to embed all libknx related classes

#### Classes

- class [config](#)  
*This class represents the configuration of the knx connection.*
- class [connection](#)  
*This class handles the ip connection(s) to the knx gateway.*
- class [data\\_point](#)
- class [dpt](#)
- class [dpt\\_1](#)  
*major class for all 1.XXX data point types*
- class [dpt\\_10](#)  
*major class for all 10.XXX data point types*
- class [dpt\\_10\\_001](#)  
*class holding a time value*
- class [dpt\\_1\\_001](#)  
*data point type 1.001 simple boolean value*
- class [dpt\\_2](#)  
*major class for all 2.XXX data point types*
- class [dpt\\_2\\_001](#)  
*data point type 2.001 control value*
- class [dpt\\_3](#)  
*major class for all 3.XXX data point types*
- class [dpt\\_3\\_007](#)  
*data point type 3.007 dimming control*
- class [dpt\\_4](#)  
*major class for all 4.XXX data point types*
- class [dpt\\_4\\_001](#)  
*data point type 4.001 char ascii*
- class [dpt\\_5](#)  
*major class for all 5.XXX data point types*
- class [dpt\\_5\\_001](#)  
*data point type 5.001 unsigned 8 bit*

- class [dpt\\_6](#)  
*major class for all 6.XXX signed 8 bit value*
- class [dpt\\_6\\_001](#)  
*data point type 6.001 percent v8*
- class [dpt\\_9](#)  
*major class for all 9.XXX data point types*
- class [dpt\\_9\\_001](#)  
*data point type 9.001 value temp*
- class [handle](#)  
*thread management for connection handling*

## Typedefs

- typedef [dpt\\_1\\_001](#) [dpt\\_switch](#)  
*data point type 1.001 is better known as switch*
- typedef [dpt\\_5\\_001](#) [dpt\\_scaling](#)  
*5.001 is better known as scaling value*
- typedef [dpt\\_10\\_001](#) [dpt\\_timeofday](#)  
*10.001 is known as time of day value including hours. minutes, seconds and day of the week*
- typedef `boost::mpl::vector`  
`< dpt\_1\_001, dpt\_2\_001,`  
`dpt\_3\_007, dpt\_4\_001,`  
`dpt\_5\_001, dpt\_6\_001,`  
`dpt\_9\_001, dpt\_10\_001 > dpt_types`

## Enumerations

- enum **dpt\_index** {  
**DPT\_1\_001, DPT\_2\_001, DPT\_3\_007, DPT\_4\_001,**  
**DPT\_5\_001, DPT\_6\_001, DPT\_9\_001, DPT\_10\_001 }**

## Functions

- `template<class dpt >`  
`KNX_IMPORT_EXPORT std::ostream & operator<< (std::ostream &os, const data\_point< dpt > &data\_↵`  
`point)`

### 5.1.1 Detailed Description

separated namespace to embed all libknx related classes

# Chapter 6

## Class Documentation

### 6.1 knx::config Class Reference

This class represents the configuration of the knx connection.

```
#include <config.hpp>
```

#### Public Member Functions

- [config](#) (int argc, char \*argv[])  
*constructor taking all command line arguments*
- [~config](#) ()  
*empty destructor*

#### Public Attributes

- [std::string local\\_control\\_host](#)  
*name or ip address of the local host (control connection)*
- [int local\\_control\\_port](#)  
*communication port for control messages*
- [std::string local\\_data\\_host](#)  
*name or ip address of the local host (data connection)*
- [int local\\_data\\_port](#)  
*communication port for data messages*
- [std::string remote\\_host](#)  
*name or ip address of the knx gateway*
- [int remote\\_port](#)  
*port of the gateway (default 3671)*
- [std::string logging\\_filename](#)  
*name of the logging file*
- [bool logging\\_activated](#)  
*indication if logging is active*

#### 6.1.1 Detailed Description

This class represents the configuration of the knx connection.

The documentation for this class was generated from the following file:

- [config.hpp](#)

## 6.2 knx::connection Class Reference

This class handles the ip connection(s) to the knx gateway.

```
#include <connection.hpp>
```

### Public Member Functions

- [connection](#) (const [knx::config](#) &config)  
*creates the connection with given config*
- [~connection](#) ()  
*simple destructor*
- void [start](#) ()  
*blocking start of the connection background thread*
- void [stop](#) ()  
*non-blocking stop of the background thread*
- template<typename data\_type >  
void [set](#) (std::string group, typename data\_type::major\_type::set\_type data)  
*central function to set any knx group value on the bus*
- template<typename data\_type >  
bool [get](#) (std::string group, typename data\_type::major\_type::set\_type &data)  
*central function to get any knx group value from the bus*
- template<typename data\_type >  
bool [listen](#) (std::string group, boost::function< void(typename data\_type::major\_type::set\_type &) > callback)  
*central function to continously get any knx group value from the bus*

### 6.2.1 Detailed Description

This class handles the ip connection(s) to the knx gateway.

### 6.2.2 Member Function Documentation

**6.2.2.1** template<typename data\_type > bool knx::connection::get ( std::string group, typename data\_type::major\_type::set\_type & data )

central function to get any knx group value from the bus

This function is used to get any value from the knx bus.

#### Parameters

<i>group</i>	A valid group id as string (e.g. "1/2/3")
--------------	---

#### Returns

true if read was successful – false otherwise

**6.2.2.2** template<typename data\_type > bool knx::connection::listen ( std::string group, boost::function< void(typename data\_type::major\_type::set\_type &) > callback )

central function to continously get any knx group value from the bus

This function is used to listen for any value from the knx bus.

A minimal example would be:

```

#include "knx.hpp"
#include "debug.hpp"
void my_callback ( knx::dpt_1_001::set_type & data )
{
    std::cout << "listened to " << data << std::endl;
}
int main ( int argc, char ** argv )
{
    knx::config config ( argc, argv );
    knx::connection connection ( config );
    knx::handle handle ( connection );
    boost::this_thread::sleep ( boost::posix_time::seconds ( 2 ) );
    connection.listen<knx::dpt_1_001> ( "0/0/1", my_callback );
    boost::this_thread::sleep( boost::posix_time::seconds ( 20 ) );
    return 0;
}

```

**Parameters**

<i>group</i>	A valid group id as string (e.g. "1/2/3")
<i>callback</i>	A function to be called whenever data has been received

**Returns**

true if registering was successful – false otherwise

### 6.2.2.3 `template<typename data_type > void knx::connection::set ( std::string group, typename data_type::major_type::set_type data )`

central function to set any knx group value on the bus

This function is used to set any value on the knx bus.

### 6.2.2.4 `void knx::connection::start ( )`

blocking start of the connection background thread

This function is a blocking call to start the background thread. It is normally only called by the handler.

**Warning**

you should not call this function from your code.

### 6.2.2.5 `void knx::connection::stop ( )`

non-blocking stop of the background thread

This function send the termination signals and waits for the thread to stop.

The documentation for this class was generated from the following file:

- connection.hpp

## 6.3 knx::dpt\_6::data Class Reference

**Public Member Functions**

- **data** (int8\_t real\_signed\_value=0)

### Public Attributes

- `int8_t real_signed_value`

The documentation for this class was generated from the following file:

- `dpt.hpp`

## 6.4 knx::dpt\_9::data Class Reference

### Public Member Functions

- `data` (float float\_value=0.f)

### Public Attributes

- `uint16_t value`

The documentation for this class was generated from the following file:

- `dpt.hpp`

## 6.5 knx::dpt\_4::data Class Reference

### Public Member Functions

- `data` (uint8\_t character=0)

### Public Attributes

- `uint8_t character`

The documentation for this class was generated from the following file:

- `dpt.hpp`

## 6.6 knx::dpt\_5::data Class Reference

### Public Member Functions

- `data` (uint8\_t unsigned\_value=0)

### Public Attributes

- `uint8_t unsigned_value`

The documentation for this class was generated from the following file:

- `dpt.hpp`

## 6.7 knx::data\_point< dpt > Class Template Reference

### Public Types

- typedef dpt::major\_type **major\_type**
- typedef major\_type::set\_type **set\_type**
- typedef major\_type::data\_type **data\_type**

### Public Member Functions

- **data\_point** (set\_type value)
- std::string **describe** () const
- set\_type **get** () const
- void **set** (set\_type value)

The documentation for this class was generated from the following file:

- data\_point.hpp

## 6.8 knx::dpt Class Reference

### Static Public Member Functions

- template<typename data\_type >  
static std::string **describe** (const typename data\_type::major\_type::set\_type &data)

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.9 knx::dpt\_1 Class Reference

major class for all 1.XXX data point types

```
#include <dpt.hpp>
```

### Public Types

- typedef uint8\_t **data\_type**
- typedef bool **set\_type**

### Static Public Member Functions

- static void **set** (set\_type value, data\_type &data)
- static set\_type **get** (const data\_type &data)

### 6.9.1 Detailed Description

major class for all 1.XXX data point types

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.10 knx::dpt\_10 Class Reference

major class for all 10.XXX data point types

```
#include <dpt.hpp>
```

### Classes

- class [time](#)  
*internal class storing a time value*

### Public Types

- typedef uint32\_t **data\_type**
- typedef [time](#) **set\_type**

### Static Public Member Functions

- static void **set** ([set\\_type](#) value, data\_type &data)
- static [set\\_type](#) **get** (const data\_type &data)

#### 6.10.1 Detailed Description

major class for all 10.XXX data point types

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.11 knx::dpt\_10\_001 Class Reference

class holding a time value

```
#include <dpt.hpp>
```

### Public Types

- typedef [dpt\\_10](#) **major\_type**
- typedef TYPENAME  
[major\\_type::set\\_type](#) **set\_type**

### Static Public Member Functions

- static std::string **describe** (const [major\\_type::set\\_type](#) &data)
- static [major\\_type::time](#) **now** ()

### Static Public Attributes

- static const int **INDEX** = DPT\_10\_001

### 6.11.1 Detailed Description

class holding a time value

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.12 knx::dpt\_1\_001 Class Reference

data point type 1.001 simple boolean value

```
#include <dpt.hpp>
```

### Public Types

- typedef [dpt\\_1](#) **major\_type**
- typedef TYPENAME  
major\_type::set\_type **set\_type**

### Static Public Member Functions

- static std::string **describe** (const major\_type::set\_type &data)

### Static Public Attributes

- static const int **INDEX** = DPT\_1\_001
- static const major\_type::set\_type **ON**
- static const major\_type::set\_type **OFF**

### 6.12.1 Detailed Description

data point type 1.001 simple boolean value

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.13 knx::dpt\_2 Class Reference

major class for all 2.XXX data point types

```
#include <dpt.hpp>
```

### Public Types

- typedef uint8\_t **data\_type**
- typedef std::pair< bool, bool > **set\_type**

### Static Public Member Functions

- static void **set** (set\_type value, data\_type &data)
- static set\_type **get** (const data\_type &data)

### 6.13.1 Detailed Description

major class for all 2.XXX data point types

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.14 knx::dpt\_2\_001 Class Reference

data point type 2.001 control value

```
#include <dpt.hpp>
```

### Public Types

- typedef [dpt\\_2](#) **major\_type**
- typedef TYPENAME  
major\_type::set\_type **set\_type**

### Static Public Member Functions

- static std::string **describe** (const major\_type::set\_type &data)

### Static Public Attributes

- static const int **INDEX** = DPT\_2\_001
- static const major\_type::set\_type **NO\_CONTROL**
- static const major\_type::set\_type **CONTROL\_VALUE\_ZERO**
- static const major\_type::set\_type **CONTROL\_VALUE\_ONE**

### 6.14.1 Detailed Description

data point type 2.001 control value

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.15 knx::dpt\_3 Class Reference

major class for all 3.XXX data point types

```
#include <dpt.hpp>
```

### Public Types

- typedef uint8\_t **data\_type**
- typedef std::pair< bool, uint8\_t > **set\_type**

## Static Public Member Functions

- static void **set** (set\_type value, data\_type &data)
- static set\_type **get** (const data\_type &data)

### 6.15.1 Detailed Description

major class for all 3.XXX data point types

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.16 knx::dpt\_3\_007 Class Reference

data point type 3.007 dimming control

```
#include <dpt.hpp>
```

### Public Types

- typedef [dpt\\_3](#) **major\_type**
- typedef TYPENAME  
major\_type::set\_type **set\_type**

### Static Public Member Functions

- static std::string **describe** (const major\_type::set\_type &data)

### Static Public Attributes

- static const int **INDEX** = DPT\_3\_007

### 6.16.1 Detailed Description

data point type 3.007 dimming control

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.17 knx::dpt\_4 Class Reference

major class for all 4.XXX data point types

```
#include <dpt.hpp>
```

### Classes

- class [data](#)

## Public Types

- typedef `data` **data\_type**
- typedef `uint8_t` **set\_type**

## Static Public Member Functions

- static void **set** (set\_type value, `data_type` &data)
- static set\_type **get** (const `data_type` &data)

### 6.17.1 Detailed Description

major class for all 4.XXX data point types

The documentation for this class was generated from the following file:

- `dpt.hpp`

## 6.18 knx::dpt\_4\_001 Class Reference

data point type 4.001 char ascii

```
#include <dpt.hpp>
```

## Public Types

- typedef `dpt_4` **major\_type**
- typedef `TYPENAME`  
major\_type::set\_type **set\_type**

## Static Public Member Functions

- static std::string **describe** (const major\_type::set\_type &data)

## Static Public Attributes

- static const int **INDEX** = DPT\_4\_001

### 6.18.1 Detailed Description

data point type 4.001 char ascii

The documentation for this class was generated from the following file:

- `dpt.hpp`

## 6.19 knx::dpt\_5 Class Reference

major class for all 5.XXX data point types

```
#include <dpt.hpp>
```

## Classes

- class [data](#)

## Public Types

- typedef [data](#) **data\_type**
- typedef uint8\_t **set\_type**

## Static Public Member Functions

- static void **set** (set\_type value, [data\\_type](#) &data)
- static set\_type **get** (const [data\\_type](#) &data)

### 6.19.1 Detailed Description

major class for all 5.XXX data point types

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.20 knx::dpt\_5\_001 Class Reference

data point type 5.001 unsigned 8 bit

```
#include <dpt.hpp>
```

## Public Types

- typedef [dpt\\_5](#) **major\_type**
- typedef TYPENAME  
major\_type::set\_type **set\_type**

## Static Public Member Functions

- static std::string **describe** (const major\_type::set\_type &data)

## Static Public Attributes

- static const int **INDEX** = DPT\_5\_001

### 6.20.1 Detailed Description

data point type 5.001 unsigned 8 bit

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.21 knx::dpt\_6 Class Reference

major class for all 6.XXX signed 8 bit value

```
#include <dpt.hpp>
```

### Classes

- class [data](#)

### Public Types

- typedef [data](#) **data\_type**
- typedef int8\_t **set\_type**

### Static Public Member Functions

- static void **set** (set\_type value, [data\\_type](#) &data)
- static set\_type **get** (const [data\\_type](#) &data)

#### 6.21.1 Detailed Description

major class for all 6.XXX signed 8 bit value

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.22 knx::dpt\_6\_001 Class Reference

data point type 6.001 percent v8

```
#include <dpt.hpp>
```

### Public Types

- typedef [dpt\\_6](#) **major\_type**
- typedef TYPENAME  
major\_type::set\_type **set\_type**

### Static Public Member Functions

- static std::string **describe** (const major\_type::set\_type &data)

### Static Public Attributes

- static const int **INDEX** = DPT\_6\_001

### 6.22.1 Detailed Description

data point type 6.001 percent v8

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.23 knx::dpt\_9 Class Reference

major class for all 9.XXX data point types

```
#include <dpt.hpp>
```

### Classes

- class [data](#)

### Public Types

- typedef [data](#) **data\_type**
- typedef float **set\_type**

### Static Public Member Functions

- static void **set** (set\_type value, [data\\_type](#) &data)
- static set\_type **get** (const [data\\_type](#) &data)

### Static Public Attributes

- static const uint16\_t **INVALID\_DATA** = 0x7fff

### 6.23.1 Detailed Description

major class for all 9.XXX data point types

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.24 knx::dpt\_9\_001 Class Reference

data point type 9.001 value temp

```
#include <dpt.hpp>
```

### Public Types

- typedef [dpt\\_9](#) **major\_type**
- typedef TYPENAME  
major\_type::set\_type **set\_type**

## Static Public Member Functions

- static std::string **describe** (const major\_type::set\_type &data)

## Static Public Attributes

- static const int **INDEX** = DPT\_9\_001

### 6.24.1 Detailed Description

data point type 9.001 value temp

The documentation for this class was generated from the following file:

- dpt.hpp

## 6.25 knx::handle Class Reference

thread management for connection handling

```
#include <handle.hpp>
```

### Public Member Functions

- [handle](#) (knx::connection &connection)  
*creates new background thread*
- [~handle](#) ()  
*stops and joins the thread*

### 6.25.1 Detailed Description

thread management for connection handling

This class handles all required background threads for asynchronous knx connection handling.

The documentation for this class was generated from the following file:

- handle.hpp

## 6.26 knx::dpt\_10::time Class Reference

internal class storing a time value

```
#include <dpt.hpp>
```

### Public Member Functions

- [time](#) ()  
*creates a current time value*

## Public Attributes

- uint8\_t **day**
- uint8\_t **hour**
- uint8\_t **minutes**
- uint8\_t **seconds**

## Static Public Attributes

- static const uint8\_t **NODAY** = 0
- static const uint8\_t **MONDAY** = 1
- static const uint8\_t **TUESDAY** = 2
- static const uint8\_t **WEDNESDAY** = 3
- static const uint8\_t **THURSDAY** = 4
- static const uint8\_t **FRIDAY** = 5
- static const uint8\_t **SATURDAY** = 6
- static const uint8\_t **SUNDAY** = 7

### 6.26.1 Detailed Description

internal class storing a time value

The documentation for this class was generated from the following file:

- dpt.hpp

# Chapter 7

## File Documentation

### 7.1 knx.hpp File Reference

```
#include "config.hpp"  
#include "connection.hpp"  
#include "handle.hpp"  
#include "dpt.hpp"  
#include "data_point.hpp"
```

#### 7.1.1 Detailed Description

General include header for libknx.

# Index

knx, [9](#)
